

Healthy Hydration Chart

There's one easy way to know if you are properly hydrated – check the colour of your urine against our 'pee chart'. Pale is good; dark urine means you could be in need of fluid. And if you find you are dehydrated, here's an easy way to rehydrate healthily: head straight to that water cooler... simple.

well hydrated

Your urine is an ideal, pale straw colour. Keep up the good work.

You're okay but you could do with a small glass of water now.

You may be a little dehydrated. Drink a couple of glasses of water now.

You need to drink about up to half litre of water right now.

Not good! You are dehydrated and may have a headache. Drink a litre of water.

poorly hydrated

Note: if your urine is even darker than this and or red/dark brown then dehydration may not be the problem. Seek medical advice.
